

St Anne's Curriculum Newsletter

Welcome to our curriculum newsletter!

We would love to share with you all of our learning this term in the wider curriculum subjects. Please enjoy reading about all the knowledge and skills that we have acquired throughout this half term in school— you will be impressed!

Don't worry if you can't see your year group, you will be featured in our next newsletter. Keep your eyes peeled!

Science in Year 3

Year 3 have been looking at Animal and Humans, specifically what foods our bodies need to grow healthy and strong. We have split up into 6 groups and each have a client who needs special advice on how to support their body for their lifestyle. Year 3 then had to develop their own balanced healthy meals for their client based on their needs and came up with these fantastic models of what they could suggest for their diet!

Digital skills in Year 2

Year 2 have been developing their digital skills during computing lessons learning how to use a computer efficiently. The children can now log on and off the laptops by themselves, find programmes and documents, save their work in a file, print their work and now draw great pictures with their fabulous mouse skills!

Forest School in Reception

Reception have enjoyed having Forest School visiting over the last term. Forest School is multi-sensory and can help improve concentration and the motivation to learn. Reception have loved learning lots of new skills gaining more independence and self-confidence as well as developing their communication skills. Some of the fun experiences include: planting seeds, making leaf crowns, searching for mini-beasts and even toasting marshmallows on the fire! We are very excited to welcome them back into school in the New Year!

Science in Y6

Our year 6 scientists have been working hard to develop their classification skills by developing keys to help group different sweets and biscuits. They all worked incredibly hard and enjoyed a biscuit at the end!

We will be developing these skills further as we study Darwin's Theory of Evolution next half term.

Design Technology in Year 5

Year 5 have worked extremely hard during their Design Technology sewing project. After receiving an email from a space exploration corporation, our design brief was to design and make a new logo for the Space X company. We researched the current market, explored different design ideas and practised different sewing stitches before starting on our products. It took lots of resilience to master the sewing techniques but the finished products are fantastic!
